

IRO Certificate #4599

NOTICE OF INDEPENDENT REVIEW DECISION

July 9, 2003

Re: IRO Case # M2-03-1108

Texas Worker's Compensation Commission:

___ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule 133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IROs, TWCC assigned this case to ___ for an independent review. ___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, ___ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Certified in Neurological Surgery. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to ___ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The determination of the ___ reviewer who reviewed this case, based on the medical records provided, is as follows:

History

The patient is a 31-year-old male who was injured on ___. The details of the injury were not submitted for this review, but the patient has had persistent pain in the upper extremities with tingling and numbness, most consistently in the C6 distributions. C5-6 pathology seen on various tests suggest that this is the area that is causing the patient's symptoms.

Requested Service(s)

Multi-level cervical ESIs x 3

Decision

I agree with the carrier's decision to deny the requested treatment.

Rationale

The patient's pathology seems to be confined to one area, and a more definitive approach to that problem such as the anterior cervical discectomy and fusion that was recommended on 4/29/03 would be more likely to lead to a long term solution than would epidural steroid injections. The patient has been 21 months since injury, and something other than a procedure that is well known to give only transient relief is indicated.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.
